EU Alternatives

Emerging European cloud providers seeking market share

This massive dependency on US cloud infrastructure creates both challenges and opportunities for European businesses seeking data sovereignty and regulatory compliance.

... bring \$60 Billion Market and EU Data back home – the migration challenge –

Countless Decisions

Complex technical and legal choices spanning architecture, compliance, and vendor selection

Extensive Budget

Multimillion dollar investments required for comprehensive cloud migration projects

Multi-Year Timeline

Extended migration periods requiring sustained expertise and project management

Organizations face overwhelming complexity when transitioning from US hyperscalers to European alternatives. The lack of accessible expertise creates barriers to data sovereignty and regulatory compliance goals.

The Knowledge Gap Crisis

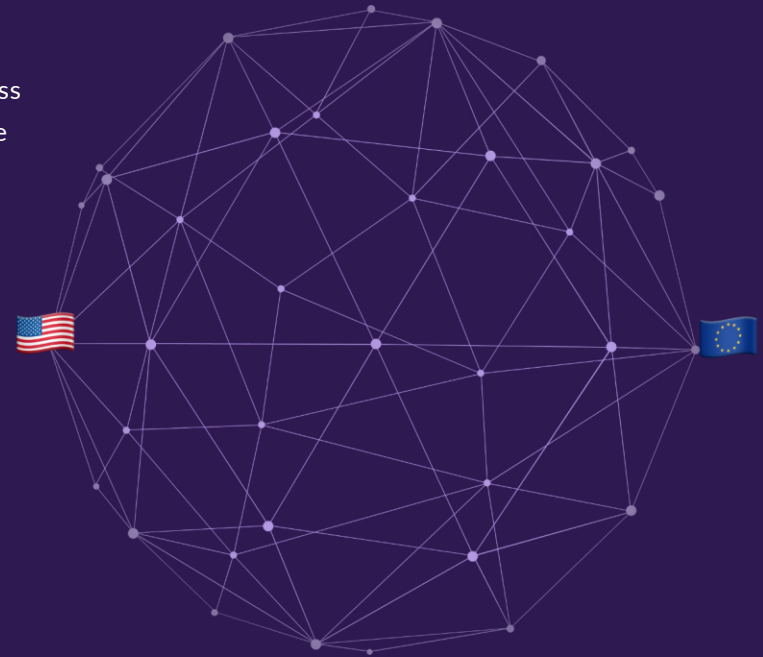

Alternative Cloud Providers Lack Visibility

European cloud providers offer robust solutions but struggle with market awareness and technical knowledge distribution. Companies need expert guidance to evaluate alternatives effectively.

Multi-Cloud Broker Expertise Required

Understanding the nuances between providers, compliance requirements, and integration challenges requires specialized knowledge that's currently scarce in the market.

- Complex vendor evaluation processes
- Integration and compatibility challenges
- Regulatory compliance navigation
- Cost optimization strategies

Multi Cloud Broker Knowledge Base For EU Cloud Providers

CloudMent is an AI-Powered cloud mentorship platform that makes expert cloud knowledge widely accessible. We bridge the gap between complex cloud technologies and practical implementation, providing instant, personalized guidance for cloud professionals at every stage of their journey.

AI-Powered Expertise

Advanced AI models trained on comprehensive cloud knowledge bases deliver expert-level guidance instantly

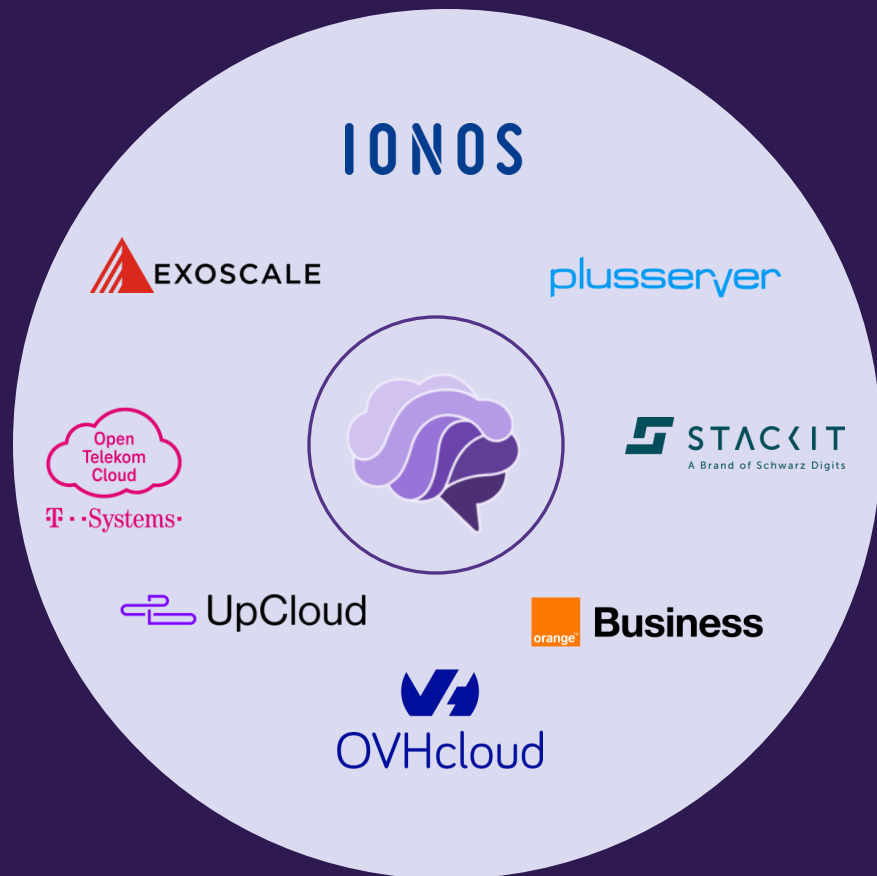

Personalized Mentorship

Tailored learning paths and recommendations based on individual skill levels and career goals

Multi-Cloud Focus

Comprehensive coverage of European and global cloud providers, not just US hyperscalers

Hi 🌟 How can I help you?

I am looking for high available cloud infrastructure in STACKIT

Here's a typical HA STACKIT architecture

I have a critical application where downtime is not permitted.

For critical scenarios, you can extend your infrastructure across different zones to ensure redundancy and prevent downtime. This setup distributes resources geographically, minimizing the impact of localized failures such as hardware malfunctions, natural disasters, or network outages.

Estimate the cost by considering a small instance for machines, 2 TB of disk storage, and 1 TB of database capacity.

CloudMent USP – Uniquely Sovereign - Validated Solutions

USP is the clever combination of following 5 features:

Open Source Foundation

Built entirely on open standards and open source software, ensuring transparency and avoiding vendor lock-in whilst maintaining full control over your infrastructure.

Sovereign Deployment

Operates exclusively on sovereign cloud platforms with European providers, ensuring complete data sovereignty. On-premise deployment options available for maximum control.

Validated Knowledge Graph

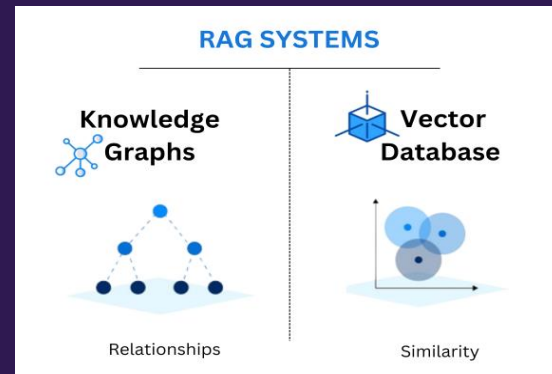

Leverages advanced Knowledge Graph technology for consistent data management, delivering precise and reliable results through validated information architecture.

Cloud agnostic / Multicloud

Designed for maximum flexibility across multiple cloud providers, enabling hybrid and multicloud strategies without compromise.

Proven by professionals

Trusted by experts and validated in real-world enterprise scenarios.

CloudMent is the only provider delivering a **sovereign solution** built entirely on validated information and data integrity.
